

VAIBHAV GULATI

🏠 Bengaluru, India 📞 +91-9717295216 ✉ gulvaibhav20@gmail.com 🐙 [GitHub](#) 🔗 [LinkedIn](#)

Skills

Core: Data Engineering, ETL, Database Migration, Data Modelling, Large Language Models (LLMs), System Design, Natural Language Processing (NLP), Backend Development, Data Structures & Algorithms, RESTful APIs, Object Oriented Programming, Design Patterns, Technical Content Writing, Research

Languages: Python, Java, JavaScript, C/C++, SQL, PL/SQL

Frameworks: PySpark, OpenAI, RASA, Numpy, Pandas, Plotly, Sktime, SpringBoot, Airflow, FastAPI, Django

Databases: MySQL, SparkSQL, PostgreSQL, OracleDB, MongoDB

Tools: Google Cloud Platform (GCP), Microsoft Azure, Git/GitHub, SonarQube, Postman, Redash, Docker

Professional Experience

BT Group

Data Engineer

Nov-2024 – Present
Bengaluru, Karnataka, India

- Spearheading the migration of enterprise data from on-prem **Oracle EDW** to **GCP**, leveraging **BigQuery**, **Cloud Storage**, **Cloud Composer**, & **Terraform** to modernize the data infrastructure & enhance data accessibility.
- Developing and maintaining robust data pipelines for **Adobe Marketo** tool, ensuring seamless data flow and integration across enterprise systems thereby enabling targeted marketing campaigns and enhanced customer engagement.

Skills: Database Migration, Google Cloud Platform, ETL, AirFlow, BigQuery, Terraform, Python

Incedo Inc. | (2 Years 4 Months)

Senior Software Engineer - Incedo Lighthouse™ (Data Focused)

Jul 2022 – Oct 2024
Gurugram, Haryana, India

- Spearheaded the database migration from **PostgreSQL** to **OracleDB**, supporting multi-database support via **Spring Hibernate ORM**, and ensured **99.9% data accuracy** with automated data sanity checks during migration.
- Led the development of a **RASA**-based conversational AI chatbot that enhanced business operations visibility, enabling users to create KPI-Trees using **LLMs** and driving **40%** efficiency improvement in decision-making processes.
- Developed and optimized batch processing workflows with **Python**, **PySpark**, & **SparkSQL** for decision automation algorithms (Outlier detection, Cohort Analysis etc), achieving **5x** performance improvement over legacy systems.
- Designed and maintained backend infrastructure (**Java**, **SpringBoot**, **RESTful APIs**) for an internal request management system, improving data visibility and user engagement by **25%** through streamlined processes.
- Automated **JIRA** worklog monitoring by developing a Python-based reporting tool, generating real-time capitalization reports and reducing manual tracking time for team managers by **5+ hours weekly**.
- Designed and implemented a **SonarQube** code quality dashboard using **Redash**, **Python**, and **Airflow**, incorporating policy-as-code principles to achieve **80%** code coverage and enhance platform reliability.
- Developed dummy dataset generation scripts to simulate real-world data for testing, ensuring platform stability and accurate validation of decision automation algorithms for various business use cases, reducing testing time by **20%**.
- Authored comprehensive user walkthroughs, technical, and integration documentation each sprint release, improving deployment efficiency and saving over **15 hours per integration cycle** for development teams.

Skills: Python, PySpark, Gen-AI, RASA, Java, SpringBoot, Airflow, PostgreSQL, OracleDB, Redash, SonarQube

Scaler | (10 Months)

Freelance Technical Content Writer

Nov-2021 – Aug-2022

- Demystified complex topics (**OOPS**, **design patterns**) through **27** engaging articles, empowering **20K+** learners on the Scaler Topics platform. [[Link](#)]

Skills: Technical Content Writing, OOPS, Design Patterns, SQL, Java, Data Structures & Algorithms

Warpspeed Technologies Pvt. Ltd. | (2 Months)

Backend Developer Intern

Aug-2021 – Oct-2021

- Spearheaded the development of **Queless**, a community-driven online ordering platform, utilizing **Django**, **RESTful APIs**, and **MySQL**.

Skills: Python, Django, Backend Development, RESTful APIs, Postman

Research Projects

Automated Soft Skills Evaluator

Published On: 01 Sept 2023

[Publication Link](#)

Project Development Duration: 1 year (2021-2022)

- Developed an automated system to assess the soft skills of an individual (using recorded webcam data). By analyzing frontal posture and vocal characteristics, the system estimates non-verbal and verbal confidence scores. Key features:
 - * *Posture Analysis:* Utilized the **MoveNet-Thunder** skeleton estimation model to assess non-verbal confidence of an individual by measuring visible frontal posture angles such as shoulder alignment, neck tilt, and arm abduction.
 - * *Disfluency detection:* Assessed verbal communication by identifying pauses, filler words, and word repetitions using a combination of **noise-reduction algorithms**, **Google Speech-to-Text model**, & **NLP** techniques.
 - * *Combined Soft Skills Evaluation:* Integrated posture and speech analysis scores to generate a soft skills evaluation, validated against thresholds derived from the **Librispeech** dataset and ergonomic posture studies.
- **Tech:** Python, Posture Estimation, Speech-to-text, NLP, Computer Vision, Noise Reduction, Tensorflow

Extractive Text Summarizer

Published On: 11 Jan 2023

[Publication Link](#) | [GitHub Link](#)

Project Development Duration: 8 months (2020-2021)

- Developed a hybrid algorithm for extractive text summarization process that integrates the strengths of lexical-based **TextRank** algorithm and bag-of-words-based **BM25+** algorithm for improved summarizing accuracy.
- Employed a normalized similarity matrix to enhance the quality of the generated summaries and performed a comprehensive evaluation using standard **ROUGE metrics** to validate the effectiveness of the proposed method.
- **Tech:** Python, NLP, Textual Analysis, Machine Learning, TextRank, BM25+, NLTK, ROUGE

Other Projects

KOL Data Standardization (KOL Profiling)

Field: Data Engineering (ETL)

[GitHub Link](#)

Project Development Duration: 1 month (2022)

- Developed an **ETL** pipeline that extracted data from various sources, transformed it using business rules and master data, and loaded it into a standardized format. This enabled efficient data management and analysis, supporting healthcare & pharmaceutical companies in identifying & engaging with KOLs (Key Opinion Leaders) more effectively.
- Utilized **Microsoft Azure Data Factory**, **Azure Data Lake Storage**, & **Azure Functions** to implement cloud-based KOL Profiling solution to ensure event-based batch-processing & standardization of large KOL datasets.
- **Tech:** ETL (Extract, Transform, Load), Microsoft Azure Data Factory, Azure Functions, Data Modeling, SQL

Publications

KPI Trees Redefined with the AI Advantage

Field: Analytics, AI, Chatbots

[Whitepaper Link](#)

Associated with: Incedo Inc.

- Authored a comprehensive techno-functional document exploring the application of AI and chatbots in optimizing KPI management and accelerating business decision-making processes for enterprise organizations

Education

Bharati Vidyapeeth's College of Engineering

*Bachelor of Technology - Computer Science & Engineering (CGPA: **9.364**)*

2018 - 2022

Delhi, India

Achievements

- Incedo Innovation Customer Excellence award 2023
- Google IT Automation - Professional Certification | **[Credly Link](#)**
- Microsoft Certified: Azure Fundamentals (AZ - 900) | **[Credly Link](#)**
